---

🎯 What Is PlayNAC-KERNEL?

PlayNAC-KERNEL is the core software engine that powers the gamification layer of the New Age Cybernetics (NAC) ecosystem. It is the implementation bridge between ERES theoretical frameworks and real-world community deployment — turning governance, ecological measurement, and economic participation into an engaging, mission-driven experience.

The KERNEL is built on three interlocking principles:

- **Progressive Disclosure** — Complex NAC concepts are introduced in layers as players develop competence
- **Earned Authority** — Governance rights and economic participation expand through demonstrated contribution
- **Resonance Alignment** — ARI/ERI biometric and ecological scoring drives game mechanics organically

> *"The most profound civilizational transformations happen when people are fully engaged."*

This repository contains the **codebase, architecture, protocol specifications, and supporting documentation** for the PlayNAC-KERNEL system. Document and PDF archives are included as reference material alongside the live code.

🏗️ Architecture Overview

```

🎮 Core Components

1. Quest Engine

Modular learning and implementation missions tied to real NAC deployment objectives. Quests range from orientation modules to infrastructure design challenges.

2. Achievement System

Mastery-based recognition built on the **EarnedPath formula:**

```
EP = CPM × WBS + PERT
```

Where CPM = Critical Path Method skill sequencing, WBS = Work Breakdown Structure completion, and PERT = risk-adjusted timeline consistency.

3. Resonance Engine

ARI (Aura Resonance Index) and ERI (Emission Resonance Index) scores function as live game-balance variables — unlocking content, adjusting difficulty, and calculating reward multipliers based on real biometric and ecological data.

```javascript
class ResonanceEngine {
  calculateRewardMultiplier(playerARI, communityERI) {
    const baseReward = 100;
    const resonanceBonus = (playerARI + communityERI) / 2;
    return baseReward * (1 + resonanceBonus / 100);
  }
}
```

4. Social Graph Engine

Collaboration network tracking peer relationships, mentorship pathways, and community challenge coordination. Feeds directly into SOMT governance participation scoring.

5. NAC Adapter Layer

Protocol bridges connecting PlayNAC to the broader ERES ecosystem:

- **SROC Adapter** — Smart Registered Offset Contracts gamification
- **ARI/ERI Bridge** — Resonance metrics as live game variables
- **UBIMIA Interface** — Meritcoin/Gracechain economic integration
- **Governance Protocols** — SOMT, ECVS, AOC/PAC participation layer

🚀 Quick Start

Prerequisites

```
Node.js 18+
Python 3.8+
PostgreSQL 12+
Redis 6+
```

Installation

```bash
git clone https://github.com/ERES-Institute-for-New-Age-Cybernetics/PlayNAC-KERNEL.git
cd PlayNAC-KERNEL

# Install dependencies
npm install
pip install -r requirements.txt

# Configure environment
cp config/default.yaml.example config/default.yaml

# Run database migrations
npm run db:migrate

# Start development environment
npm run dev
```

Configuration

```yaml
```

```yaml
# config/default.yaml
nac_integration:
  ari_endpoint: "https://api.eres-institute.org/v1/ari"
  eri_endpoint: "https://api.eres-institute.org/v1/eri"
  sroc_oracle: "https://oracle.eres-institute.org/sroc"

game_engine:
  quest_complexity: "progressive"
  achievement_thresholds:
    beginner: 100
    intermediate: 500
    advanced: 2000
  social_features: true
```

🧩 Learning Pathway Design

PlayNAC uses scaffolded progression to onboard participants at any entry point:

```javascript
```

```
const learningPath = {
  beginner: [
    "nac_fundamentals",
    "community_introduction",
    "basic_resonance_awareness"
  ],
  intermediate: [
    "sroc_participation",
    "governance_engagement",
    "meritcoin_integration"
  ],
  advanced: [
    "infrastructure_design",
    "regional_coordination",
    "planetary_stewardship"
  ]
};
```

📖 Documentation Archive

This repository includes a substantial archive of PDF and Markdown reference documents developed through the **MIEVM (Multi-Instrument Ensemble Validation Method)** process — representing multi-AI synthesis sessions, framework drafts, implementation guides, and white papers developed between 2012 and 2025.

These documents serve as the **specification layer** for the codebase. The `docs/` directory provides the canonical reading path; files in the root directory represent the raw working archive.

Key entry points:

- `Configuring Civilization through PlayNAC.pdf` — Framework overview
- `ERES PlayNAC ARI _KERNEL_ (Version 8.0).md` — Kernel v8 specification
- `ERES PlayNAC Grok KERNEL Codebase V.3.md` — Grok-generated v3 codebase session
- `ERES PlayNAC Claude.ai Codebase (V.2).md` — Claude-generated v2 codebase session

🤝 AI Collaboration Credits (MIEVM)

All AI contributions are disclosed per ERES transparent collaboration methodology. Framework ownership belongs entirely to Joseph Allen Sprute / ERES Institute.

AI System	Role
Claude (Anthropic)	Architecture synthesis, NAC adapter layer, Transmission Series integration
ChatGPT (OpenAI)	Semantic co-authoring, codebase v1
Grok (xAI)	Codebase v3, KERNEL development, covenant drafting
DeepSeek	Codebase v2.1, Epiphany Rampup protocol

🗺️ Roadmap

Phase	Focus	Status
Phase 1	Core engine, quest system, achievement framework	🔄 Active
Phase 2	ARI/ERI oracle integration, Meritcoin hooks	📋 Planned
Phase 3	Multi-community challenges, advanced analytics	📋 Planned
Phase 4	Planetary coordination, full UBIMIA integration	🔭 Vision
